

Mudéjar Wagyu

MUDEJAR KINUKINU Q9713

FATHER: KINUSURUKIKU H224
MOTHER: KINUTASUDOI Y6350

Register | CIB: ES080202909713

Date of Birth: 08/05/2019

Breeder: MUDÉJAR WAGYU

Breed: WAGYU FULLBLOOD

DEEP PEDIGREE

FATHER LINE

Kitatsurukikudoï 007 is a line bred to the famous "Hyogo Cow", recognised by **Kikutsuru** as the cow that had the greatest influence on increasing the size and carcass quality of the Tajima bloodlines. Kinusurukiku H224's dam, Blackmore Kinu Y385, is the best 100% Tajima cow in the Kinu family. Blackmore Kinu Y385 is Kikumidoï blood, which makes him an ideal cross with Kitatsurukikudoï J007 (Nakadoï blood) to maintain size and increase carcass quality. The data shows the carcass quality and weights obtained from Blackmore Kinu Y385.

MOTHER LINE

KINUYASUDOÏ: Son of **KIKATERUYASUDOÏ**, born in Japan, **TERUNAGADOÏ** is one of the famous bulls of the Kikumidoï line.

The main characteristics of Kikateruyasudoï are heavy weight and daily weight gain, together with fat streaks, complement the good quality meat and milk production of the Kikumidoï strain.

The famous Kinu 1: the first 100% Tajima cow out of Japan is in the Kinuyasudoï pedigree on the maternal side. This combination was intended to improve the Kikumidoï line and the resulting progeny have been impressive. The females are strong, with firm muscle distribution, depth of rib, and milk production. The Y350 siblings were among the best carcasses. Kinuyasudoï is ideal for purebred and F1 breeding.
