

Mudéjar Wagyu

MUDEJAR KINZUKINU Q9673

FATHER: KINUZURUDOI K730
MOTHER: KINZURU E006

Register | CIB: ES040202909673

Date of birth: 09/02/2019

Breeder: MUDÉJAR WAGYU

Breed: WAGYU FULLBLOOD

DEEP PEDIGREE

FATHER LINE

This is one of the most important and unique cow families. We identify Kinu 1 as a unique breeding cow, being the only known 100% Tajima cow and the only Okudoï bloodline to be exported from Japan. The progeny of this family, known as Kinuko, carries 75% of the Tajima lineage, the ideal percentage to have in our main breeding herd to increase carcass size and weight while maintaining consistent quality. These bloodlines are producing outstanding carcasses that go beyond marbling alone. The marbling, meat colour and

fat colour combine to deliver a beautiful piece of meat, the flavour is accentuated through a feeding process that uses natural ingredients to achieve the perfect balance between sweetness and richness.

Descendants of the Aihime foundation cow, they are large in size and the quality of their meat is high. The maternal line of the past five generations were bred in line to Dai Nana Itozakura, so this bloodline is almost entirely of Itozakura genetics. The ancestors were extremely large and weighed over 850 kgs.

The Aizakura cow family is considered by Blackmore to be his best family. Blackmore's foundation cow Aizakura U100 has her genetic influence on more than 2,400 offspring born on his farm. She combines the three most important traits, producing daughters that breed, superior sons that improved the economic value of their offspring mate and high levels of fertility, not only to produce a calf each year, but respond well in embryo transfer and semen collection programmes.
