

Mudéjar Wagyu

MUDEJAR KINUHIKO Q7488

FATHER: KINUSURUKIKU H224
MOTHER: KINZURU E006

Register | CIB: ES000202927488

Date of birth: 14/10/2019

Breeder: MUDÉJAR WAGYU

Breed: WAGYU FULLBLOOD

DEEP PEDIGREE

FATHER LINE

Kitatsurukikudoï 007 is a line bred to the famous "Hyogo Cow", recognized by Kikutsuru as the cow that had the greatest influence on increasing the size and carcass quality of the Tajima bloodlines.

Kinusurukiku H224's dam, Blackmore Kinu Y385, is the best 100% Tajima cow in the Kinu family. Blackmore Kinu Y385 is Kikumidoï blood, which makes him an ideal cross with Kitatsurukikudoï J007 (Nakadoï blood) to maintain size and increase carcass quality. The data shows the carcass quality and weights obtained from Blackmore Kinu Y385.

MOTHER LINE

Descendants of the Sakae 2 cow when bred to Chiyokura (predominantly Shimane line), which was the champion bull in the first Japanese bull production ability contest. This cow family split in two with the successful crossbreeding of Shigekazu (Shigekanenami) and Fukukanenami (sire of Dai 3 Kiyohime) both Tajima Nami line.

The Chiyonami cow family is a Blackmore part of the Chiyotake cow family (Fukukanenami) which is the result of the line breeding the Tajima Nami family with the introduction of the Itoshigenami sire TF148 to improve the robustness already present in the cow family.

The Chiyoyuki cow family is a Blackmore breed from the Chiyotake (Shigekazu) cow family which is the result of the increase of the already existing huge size in this cow family by the introduction of Yukiharunami 4 (1,100 kg bull).
