

Mudéjar Wagyu

MUDEJAR KINUYA Q7468

FATHER: YASUCHIYO C058
MOTHER: KINUYASUDOI Y350

Register | CIB: ES020202927468

Date of Birth: 25/07/2019

Breeder: MUDÉJAR WAGYU

Breed: WAGYU FULLBLOOD

DEEP PEDIGREE

FATHER LINE

This bull produces good quality carcasses and adds good milking ability to the Tajima lines. He is ideal for producing breeding females and is a Dai 7 Itozakura bred line. TF Itohana 2 is a Fujiyoshi Fullblood Wagyu bull used to increase frame size and improve maternal ability. The progeny of TF Itohana 2 also exhibit excellent maternal ability, good milking ability and good frame size. He is an Aino 6 male calf, a remarkable fact given that 100% of the carcasses (17 of 17 cattle slaughtered) in the Aino group graded A-5; the highest grade possible and the average live weight was 1,040 lbs.

KINUYASUDOI: Son of **KIKATERUYASUDOI**, born in Japan, his father **TERUNAGADOI** is one of the famous bulls of the Kikumidoi line. The initial characteristics of Kikateruyasudo, heavy weight and daily weight gain, together with fat streaks, complement the good quality meat and milk production of the Kikumidoi strain. The famous Kinu 1: the first 100% Tajima cow out of Japan is in the Kinuyasudo pedigree on the maternal side. This combination was intended to improve the Kikumidoi line and the resulting progeny have been impressive. The females are strong, with firm muscle distribution, depth of rib, and milk production. The Y350 siblings were among the best carcasses. Kinuyasudo is ideal for purebred and F1 breeding.
